

Delpark® Filters - Customized Wastewater Treatment Solutions

for the

Food and Beverage Processing Industry

Customized Wastewater Treatment Solutions designed and built by Ace Manufacturing help provide sustainability to the Food & Beverage Processing Industry by providing economic and environmental benefits.

Here's how:

- Increasing Profitability by elimination of wastewater surcharges and fines
- Reduction of wastewater charges based on Inflow/outflow Differential
- Providing Cost Effective Treatment Technologies
- Fully Integrated, Single Source Solutions
- Increasing Competitiveness using Sustainability Strategies
- Meeting Environmental Challenges through Innovation

Increasing costs related to competition, regulations and product safety in the food and beverage industry necessitate the need for realizing cost efficiencies in every aspect of the industry. Ace Manufacturing provides customized treatment systems and solutions designed to manage the increasing costs of wastewater treatment surcharges and eliminate fines. It is our goal to provide cost effective treatment options and technologies while continuously providing new innovations to meet strict and evolving water and wastewater disposal requirements. We offer a complete turnkey package of wastewater treatment equipment and technology that can result in significant savings with shortened equipment payback times.

One of the most problematic wastewater issues in the Food & Beverage industry is the high concentration of BOD's (Biological Oxygen Demand) and TSS (Total Suspended Solids) that are produced systematically in the manufacture process. Removal or reducing high concentrations of BOD's and TSS can effectively eliminate /reduce wastewater surcharges and fines charged by municipalities for the treatment of wastewater. Delpark® Filters treatment technology and equipment provide a comprehensive, solutions approach to the treatment of wastewater and are designed to maintain compliance, quality and safety in the Food and Beverage industry. Every system is custom built and designed to meet your specific process requirements and treatment issues while recognizing your unique and distinct processes.

Delpark® Filters - Customized Wastewater Treatment Solutions for the Food and Beverage Processing Industry

As part of the Food & Beverage Industry being able to identifying key opportunities to develop competitive advantages helps drive meaningful improvements to your business and its processes. The opportunity to integrate sustainability into your processes will also save you money. Maintaining and controlling your wastewater treatment costs will ensure continued success.

Key Benefits Offered:

- Reduced Operating Costs
- Meets municipal wastewater effluent targets
- Ease of Operations
- Compact footprint
- Environmentally Friendly

As a food and beverage processor or supplier you have a tremendous responsibility to your customer with regards to food safety, nutrition, food labeling, plant security, and quality management protocol. Additionally, municipal, regional and federal governments ensure your food safety standards and practices meet strict regulatory guidelines and controls to protect markets from harmful practices.

Simplify your Wastewater Management Solutions by speaking with a Delpark® Filters representative today and find out how we can help you customize a solution tailored to your needs while meeting all municipal, regional and federal guidelines for the safe treatment and disposal of your wastewater.
